Dear Data Custodians,

Re: 2022.12 Australian Urban Health Indicators (AusUrb-HI): Urban Heat, Liveability and Health study

The researchers have responded to feedback that was provided in a meeting with the NSW APDC/EDDC Data Custodians in August 2022. There was no email trail to refer back to so I have reviewed the responses (including the revised and new documents) based on what was discussed in August 2022.

-

Please note: The researchers are requesting access to 'SA1' variables. The researchers are now additionally requesting indigenous variables from NSW APDC, NSW EDDC and NSW COD URF and have made the following additions to the CHeReL combined protocol and application since the first submission: addition of Professor David Preen accessing linked data, addition of new aggregated AURIN datasets (pages 26 and 27) and change in lookback period to 10 years for linked data.

Please note: NSW RBDM-deaths, COD URF Data Custodian approval has already been provided, this email should be treated as an FYI, for this custodian. Should you feel re-approval is necessary, please contact me.

-

The researcher has provided the below documents for further review and approval:

- Combined protocol and application for data (track changes version)
- Analysis plan (new document)
- Risk benefit document (new document)
- Variables lists (Note: Indigenous status variable has been added to NSW APDC, NSW EDDC and NSW COD URF datasets)
- Draft HREA (modified to include experience of investigators)

Also attached is a copy of the original documents which can also be found in **TRIM: H22/67513**

If you are happy to support this project, please return the attached sign off form, or reply confirming your support for this application. Should you have any questions, please feel free to contact me.

Kind regards,
Carolyn

Subject: 2022.12 New project for DC approval - 'AusUrb-HI Heat, Liveability and Health study'

Dear Data Custodians,

Re: 2022.12 Australian Urban Health Indicators (AusUrb-HI): Urban Heat, Liveability and Health study

We have received an application hoping to link data from these NSW collections: APDC, EDDC, RBDM-deaths and COD URF.

Please note: The researchers are requested access to 'SA1' variables and have provided a separate document outlining their justification for the inclusion of this variable.

Attached you will find the following documents:

- Combined protocol and application for data
- HREA
- NSW privacy form
- Variable lists
- Justification for SA1 data
- Risk vs benefit document
- Study area geocodes
- Sign off forms

These documents can also be found in **TRIM: H22/67513.**

This project has been reviewed by Elizabeth Moore, CHeReL Client Services Unit Manager, and

has been deemed technically feasible.

If you are happy to support this project, please return the attached sign off form to me and I will forward it to the researcher. Should you have any questions, please feel free to contact me.

Kind regards,
Sam
